

Seasonal Updates

Daptiv gives PPM users seasonal updates so customers always have access to the latest features and functionality.

With the launch of Daptiv PPM Spring '09, Daptiv, the creator of the first online Gantt chart, releases its updated graphical tool for creating and managing project schedules online.

Thank You, Henry.

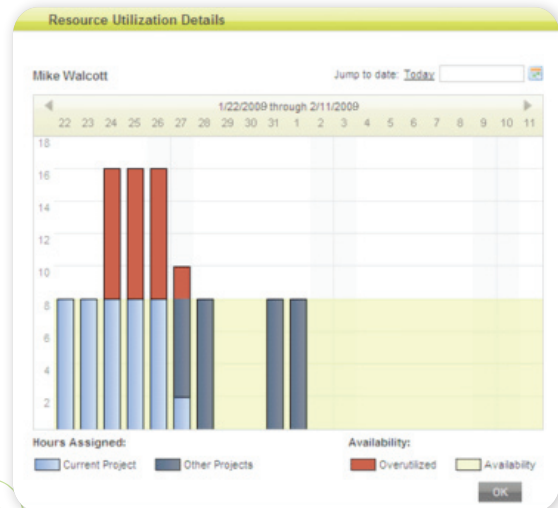

Henry Gantt's (1861-1919) vision for managing work led to the graphical schedules that bear his name: Gantt charts today help managers and team members to plan, control and track work to get work done on time and under budget. Having launched the first online Gantt chart for PPM in 2002, Daptiv releases a better, faster and more complete Gantt chart with Daptiv PPM Spring '09.

New in the Gantt

Previously in Beta, the new Daptiv PPM Gantt chart adds additional features to make it easier for project managers to create and manage schedules:

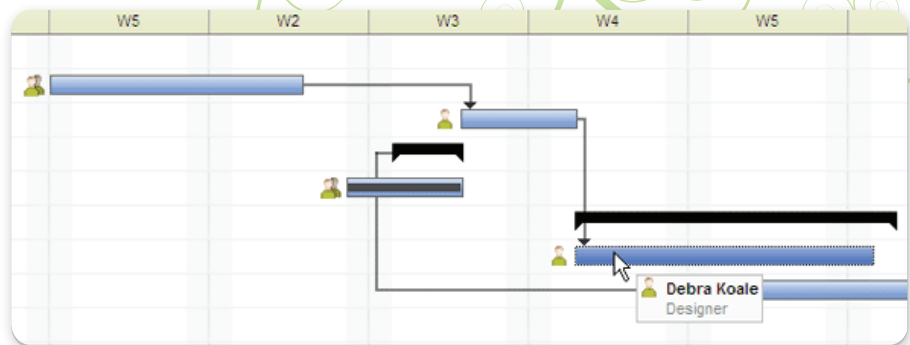

- A new Resource Utilization Details window lets you see daily utilization of all project resources, and make assignment decisions based on their availability over time
- Copy and paste tasks within a schedule (preserving dependencies) lets you build out project schedules more quickly

Gantt Improvements

“The speedy new Gantt chart is changing the way we work. We create project schedules directly in Daptiv PPM without relying on external project tools.”

Andrew Gross, Senior Project Manager, Technology Operations PMO, Kaplan Test Prep

- The new Gantt chart runs faster and handles more tasks!
- The updated UI includes a canvas that lets you “paint” new tasks, change/move tasks and create dependencies via click-and-drag, and drag and drop resources to assign to tasks
- New pre-defined and text-entry filters to make it easier to work with large project schedules

New!

With the launch of Spring '09, Daptiv announces its new ISO 27001:2005 certification – meaning that Daptiv fulfills the requirements of operating an Information Security Management System (ISMS) – more confirmation that Daptiv has the systems and processes in place to protect its customers' data.

System Requirements

Internet Explorer 6, 7 or

Firefox 3+

That's right -- all you need is a browser!

The On-demand Advantage

- Daptiv delivers its PPM auto-updates via the web, requiring no installation or re-configuration
- Daptiv provides security, redundancy, uptime, maintenance, and new features; you provide your creativity and business smarts to improving your work and your business
